SECTION I
SIGNIFICANT ORGANIZATIONAL ACTIVITIES

3
AVCA MB-DP

6 May 1967

SUBJECT: Operational Report - Lessons Learned for Quarterly Period Ending
30 April 1967 (RCS CSFOR-65)

A. A major reorganization of the 32nd Medical Depot took place during the reporting period. General Order Number 52, Headquarters USARPAC, dated 15 March 1967, brought the Depot from reduced to full strength while deactivating the 54th Medical Detachment (Supply) and the 275th Medical Detachment (Supply). These units had functioned as advanced platoons under the Depot. Personnel of these units were transferred to the 32nd Medical Depot and have formed the nucleus for the two additional advanced platoons now authorized under full TO&E. The General Order also added an augmentation of one Warrant Officer and seventeen enlisted men to perform field maintenance on the MUST hospitals. These personnel are not present for duty, but are expected to arrive sometime in July 1967.

B. The Depot experienced the following change of commanders during the reporting period:

LTC Bernard F. Kerwin	19 Sep 1966 to 20 Feb 1967
LTC Hillard F. Wiatrowski	21 Feb 1967 to 23 Feb 1967
CPT Milton W. Showell	24 Feb 1967 to 5 Mar 1967
MAJ Donald J. Cissell	6 Mar 1967 to 12 Mar 1967
COL William W. Southard Jr.	13 Mar 1967 to 14 Apr 1967
LTC Richard S. Rand	15 Apr 1967 to Present

C. The following statistical workload data are applicable for the report period:

(1) Tonnage received:	4,473
(2) Tonnage shipped:	3,086
(3) Tonnage on hand at the end of the period:	3,487
(4) Line items processed:	128,569
(5) Total line items stocked:	19,342
(6) Medical Maintenance Activities:	
(a) Total work orders completed:	426
(b) Total work orders referred to Okinawa:	75
(c) Total medical equipment and item density supported:	22,460

AVGA MB-IP

6 May 1967

SUBJECT: Operational Report - Lessons Learned for Quarterly Period Ending
30 April 1967 (RCS CSFOR-65)

(7) Optical Activities:

(a) Total spectacles fabricated or repaired locally: 17,506

(b) Total spectacle prescriptions referred to Okinawa
for fabrication: 5,886

D. During the past three months there has been a complete reorganization of the Storage Division. A document control system has been devised and is in effect. The manual locator system is being changed to the nine digit numbering series which is outlined in TM 74j-200, Storage and Material Handling. The existing warehouses are being rewarehouseed by class. Each warehouse will then contain bulk stocks and box pallet storage. The unit pick-up area has been moved to conexes outside and has proved to be very effective and efficient, also an outside shipping area has been designated to store supplies while awaiting transportation to the applicable point for shipment.

E. VIP visitors during the reporting period are listed in appendix I.

SECTION II. - OBSERVATIONS

A. PERSONNEL:

ITEM: TDY Personnel.

DISCUSSION: The depot was given 30 enlisted personnel for 60 days to relieve an extreme personnel shortage and process an accumulation of medical supplies. These individuals came from other medical units in-country. They were extremely difficult to motivate and were generally assumed to have been the least effective individuals of their respective organizations.

OBSERVATION: It is understandable that a commander will give up his least effective personnel first when required to furnish personnel to another unit. In many cases the depot's problems were only increased by the low quality of personnel received. The use of TDY personnel was necessary because of the seriousness of the situation, and the job was accomplished through the use of these individuals. This experience indicates, however, that TDY personnel in many instances can be of only limited effectiveness and are apt to be of poor military background.

B. LOGISTICS

ITEM: Plague Vaccine.

DISCUSSION: An outbreak of plague in the Cam Ranh Bay area placed a sudden and unprecedented demand for plague vaccine on the Depot. The previous year's total demand had been for 11,823 bottles. The demand for a six week period in which the epidemic occurred was for 13,872 bottles. The requirement to inoculate the local civilian population in addition to military personnel was a major strain on existing resources. Response to the Depot's emergency requisitions brought in plague vaccine from CONUS, Okinawa and Korea. It was this response that enabled the Depot to continue to meet heavy demands for vaccine.

OBSERVATION: Plague vaccine requires refrigeration and has a potency date of 18 months. These factors limit the amount of vaccine that can be kept on hand at any one time. Vaccine on hand will be able to meet expected demands, but large unexpected demands must be met on an emergency requisition basis.

ITEM: Medical Oxygen

DISCUSSION: Because of the high purity necessary (99.5%), medical oxygen is difficult for one of the local gas generating plants to produce. In the past there was a tendency for the depot to depend too heavily on local production sources for oxygen and sufficient emphasis was not placed upon maintaining an adequate stockage level. Failure of plant machinery and the consequent inability to procure oxygen locally, confirmed the necessity of having an adequate stockage of oxygen on hand at all times.

OBSERVATION: A continual effort is required to keep oxygen on hand at an adequate stockage level. When the primary source of oxygen fails, requisitions to medical supply points can be submitted and immediately filled. The fact that the local supply source did fail necessitated a re-evaluation of stockage levels which strengthened the depot's capability to provide oxygen on demand.
